UNIVERSITYOFMUMBAI

Revised Syllabus for the M. E. Program

Program: M. E. (Mechanical)

CAD CAM and Robotics

(As per **Choice Based Credit System** with effect from the academic year 2016–2017)

From Co-ordinator's Desk:-

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education. The major emphasis of accreditation process is to measure the outcomes of the program that is being accredited. In line with this, Faculty of Technology of University of Mumbai has taken a lead in incorporating philosophy of outcome based education in the process of curriculum development.

Faculty of Technology, University of Mumbai, in one of its meetings unanimously resolved that, each Board of Studies shall prepare some Program Educational Objectives (PEOs), give freedom to Affiliated Institutes to add few (PEOs), course objectives course outcomes to be clearly defined for each course, so that all faculty members in affiliated institutes understand the depth of approach of course to be taught, which will enhance learner's learning process. It was also resolved that, maximum senior faculty from colleges and experts from industry are to be involved while revising the curriculum. I am happy to state that, each Board of studies has adhered to the resolutions passed by Faculty of Technology and developed curriculum accordingly. In addition to outcome based education, **Choice Based Credit System** is also introduced to ensure quality of engineering education.

Choice Based Credit and Grading System enables a much-required shift in focus from teacher-centric to learner-centric education, since the workload estimated is based on the investment of time in learning and not in teaching. It also focuses on continuous evaluation which will enhance the quality of education. University of Mumbai has taken a lead in implementing the system through its affiliated Institutes. Faculty of Technology has devised a transparent credit assignment policy, adopting a ten point scale to grade learner's performance. Choice Based Credit and Grading System is implemented for Master of Engineering from the academic year 2016-2017.

Dr. S. K. Ukarande
Co-ordinator,
Faculty of Technology,
Member - Academic Council
University of Mumbai, Mumbai

Chairman's Preamble:

Engineering education in India is expanding and is set to increase manifold. The major challenge in the current scenario is to ensure quality to the stakeholders along with expansion. To meet this challenge, the issue of quality needs to be addressed, debated and taken forward in a systematic manner. Accreditation is the principal means of quality assurance in higher education and reflects the fact that in achieving recognition, the institution or program of study is committed and open to external review to meet certain minimum specified standards. The major emphasis of this accreditation process is to measure the outcomes of the program that is being accredited. Program outcomes are essentially a range of skills and knowledge that a student will have at the time of graduation from the program. In line with this Faculty of Technology of University of Mumbai has taken a lead in incorporating the philosophy of outcome based education in the process of curriculum development.

As the Chairman, Board of Studies in Mechanical Engineering of University of the Mumbai, I am happy to state here that, the Program Educational Objectives for Postgraduate Program were finalized in a brain storming session, which was attended by more than 20 members from different affiliated Institutes of the University. They are either Heads of Departments or their senior representatives from the Department of Mechanical Engineering. The Program Educational Objectives finalized for the postgraduate program in Mechanical Engineering are listed below;

- 1. To prepare the Learner with a sound foundation in the mathematical, scientific and engineering fundamentals.
- 2. To prepare the Learner to use modern tools effectively in order to solve real life problems.
- 3. To prepare the Learner for a successful career in Indian and Multinational Organisations
- 4. To encourage and motivate the Learner in the art of self-learning.
- 5. To inculcate a professional and ethical attitude, good leadership qualities and commitment to social responsibilities in the Learner's thought process.

In addition to the above, 2 to 3 more program educational objectives of their own may be added by affiliated Institutes.

In addition to Program Educational Objectives, for each course of postgraduate program, objectives and expected outcomes from a learner's point of view are also included in the curriculum to support the philosophy of outcome based education. I strongly believe that even a small step taken in the right direction will definitely help in providing quality education to the major stake holders.

Dr. S. M. Khot

Chairman, Board of Studies in Mechanical Engineering, University of Mumbai

Program Structure for ME Mechanical Engineering (CAD/CAM and Robotics) Mumbai University (With Effect from 2016-2017)

^{*}Seminar of Semester III and Dissertation II of Semester IV should be assessed jointly by the pair of Internal and External Examiners

Note- The Contact Hours for the calculation of load of teacher are as follows

Seminar - 01 Hour / week / student

Project I and II - 02 Hour / week / student

| CourseCode | Course Name | Credits |
|------------|-----------------------|---------|
| CCC101 | Computer Aided Design | 04 |
| | | |

Course Prerequisites:

- 1. Linear Algebra Basics of Matrix Multiplication and Coordinate Geometry
- 2. Good programming skills

Objectives:

- 1. Learn the rudiments of Computer Aided Design (CAD) and CAD systems.
- 2. Use 3D modeling software to accurately generate and easily modify graphical representations of the product
- 3. Enable the use of efficient product data management techniques.
- 4. Enable the use of programming languages to program various algorithms for problem solving—related to generation of computer graphics and application to engineering design process.

Outcomes: Upon completion of the course, learner should be able to—

- 1. Integrate the role of graphic communication in the engineering design process.
- 2. Use algorithmic foundation for solving problems by writing computer programs.
- 3. Implement 2D and 3D transformations for positioning/shaping objects, or to change viewing positions, or even to change how something is viewed (e.g. perspective projections)
- 4. Formulate the parametric representation of standard conic shapes, 2D and 3D freeform curves and surfaces in the most efficient manner—required for creating complex profiles and geometries.
- 5. Describe various techniques of computer simulated reality i.e. virtual realism.

| Module | Detailed content | Hours |
|--------|--|-------|
| 1 | Introduction to Computer Graphics: Definitions, Classification, Architecture | 8 |
| | of Interactive Computer Graphics, Applications | |
| | Display &Interactive devices | |
| | Scan Conversion: Pixel plotting, Scan Conversion of Line, Circle, Ellipse, | |
| | Parabola, Hyperbola. | |
| | Effects of Scan conversion | |
| | Polygons: Types, Polygon filling using Boundary fill, edge fill, Flood fill | |
| | algorithms, Scan conversion with Real Time scan conversion, Run length | |
| 2 | Object Transformations: 2D & 3D (Translation, Rotation, Reflection, Scaling, | 8 |
| | Shearing); Homogeneous Coordinates, Decomposition of combined | |
| | transformation matrix into basic transformation matrices (limited to three) | |
| | taken in order | |
| 3 | 2-D Viewing & Clipping, 3D Viewing & Clipping | 8 |
| | Projections: Parallel &Perspective Projections | |
| 4 | Curves: Spline curve, Bezier curve, DeCasteljau Algorithm for generating | 8 |
| | Bezier curves (limited to cubic curves), B-Spline curve, NURBS curve | |
| | Surfaces: Hermite, Bezier & B-Spline surfaces | |
| 5 | Virtual Reality: Hidden Lines & Hidden Surfaces: Z-Buffer, Painters, Area- | 8 |
| | Subdivision, Scan Line algorithm | |
| | Light, Color &Shading Models, Animation | |

| 6 | CAD &Geometric Modeling: Features of Modeling & Assembly Packages, | 8 |
|---|---|---|
| | Types of Geometric Modeling, Data Structures, Product Data Exchange | |
| | Formats. | |
| | Fundamentals of CAE: General procedures of Numerical methods like FEM | |
| | & FDM, Kinematic Analysis & Animation, Features and Application of | |

Internal:

Assessment consists of two tests out of which; one should be compulsory class test (on minimum **Two Modules**) and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved.

| Course Code | Course Name | Credits |
|-------------|---------------------|---------|
| CCC102 | Control Engineering | 04 |

- 1. To impart an advanced understanding of classical controls theory
- 2. To understand the equivalent mechanical and electrical systems

- 1. Model system and find Transfer function.
- 2. Check stability of a mechanical system.
- 3. Understand response of second order system
- 4. Understand controllability and observability of linear system

| Module | Detailed Contents | Hrs. |
|--------|--|------|
| 01 | Introduction to control systems. Classification of control system, Effect of feedback. Mathematical modeling of control systems (mechanical, electrical systems), concept of transfer function. Block diagram algebra, and signal flow graphs. | 06 |
| 02 | Time response analysis: Time response of control system, standard test signal, Time Response Analysis of First and Second order system, Time Domain specifications. Step response of second order system. Steady-stateerrors, static error constants, steady state, analysis of different type of systems using step. Ramp and parabolic inputs. Response with P,PI,PD,PID Controller. | 10 |
| 03 | Classification of control systems according to 'TYPE' of systems, Stability analysis: Introduction to concepts of stability. The Routh and Hurwitz stability criteria. Relative stability analysis. | 10 |
| 04 | Root locus Techniques. Frequency Response Analysis, Frequency domain specifications Correlation between time and frequency response. Polar Plots. Bode Plots, Nyquist Plots, | 10 |
| 05 | State space modeling: Concept of state, state variable, state model. State space representation using physical and phase variables, decomposition of transfer function, diagonalisation. State transition matrix. Transfer function from state model. Controllability and observably of linear system. | 08 |
| 06 | Compensation (Introduction only): Types of compensator, selection of compensator, Lead, Lag and Lag-Lead compensation. Control system Components: servomotor, stepper motors, Synchros, Potentiometer, amplifiers | 08 |

| CCDLO1012 | Simulation and Modelling | 04 |

- 1. The primary objective of this course is to provide an insight into how simulation modeling can aid in effective decision-making.
- 2. It provides students with the basic system concept and definitions of system techniques to model and to simulate various systems, the ability to analyze a system and to make use of the information to improve the performance.

- 1. Understand the system concept and apply functional modeling method to model the activities of a static system;
- 2. Simulate the operation of a system and make improvement according to the simulation results.

| Module | Detailed content | Hrs. |
|--------|--|------|
| 1 | Principle of computer modelling and simulation: | 05 |
| | Monte Carlo simulation. Nature of computer- modeling and simulation. | |
| | Limitations of simulation, areas of applications. Components of a system - | |
| | discrete and continuous systems, Models of a system -a variety of modeling | |
| | Approaches. | |
| 2 | Discrete Event Formalisms | 10 |
| | Concepts of discrete event simulation, model components, a discrete event | |
| | system simulation, simulation world views or formalisms. Characteristics of | |
| | queueing systems, queueing notations, long run measures of performance of | |
| | queueing systems, Steady state behavior of Markovian models (M/G/1, M/M/1, | |
| | M/M/c) overview of finite capacity and finite calling population models, | |
| | Network of Queues simulation of single channel queue, multi channel queue, | |
| | inventory system and dump truck problem using event scheduling approach. | |
| 3 | Statistical Models in Simulation | 8 |
| | Overview of probability and statistics, useful statistical model, discrete | |
| | distribution, continuous distribution, empirical distribution and Poisson process. | |
| | Discrete uniform -distribution poisson distribution -geometric distribution - | |
| | acceptance -rejection technique for Poisson distribution gamma distribution. | |
| 4 | RANDOM NUMBER GENERATION: Techniques for generating random | 10 |
| | numbers- Mid square method -the mod product method -Constant multiplier | |
| | technique -Additive congruential method -Linear congruential method -Tests for | |
| | random numbers -The Kolmogorov-Smimov test -the Chi-square test | |
| | RANDOM VARIABLE GENERATION: Inversion transforms technique- | |
| | exponential distribution. uniform distribution, weibul distribution, continuous | |
| | distribution, generating approximate normal variates-Erlang distribution. | |
| 5 | Input Modeling | 10 |
| | Introduction, steps to build a useful model of input data, data collection, | |
| | identifying the distribution with data, parameter estimation, suggested | |
| | estimators, goodness of fit tests, selection input model without data, covariance | |
| | and correlation, multivariate and time series input models. | |
| | | |
| | | |

6 Verification and Validation of Simulation Model

Introduction, model building, verification of simulation models, calibration and validation of models:- validation process, face validity, validation of model, validating input-output transformation, t-test, power of test, input output validation using historical data and Turing test.

Output Analysis

Types of simulations with respect to output analysis, stochastic nature of output data, measure of performance and their estimation, output analysis of terminating simulators, output analysis for steady state simulation. variance reduction techniques -antithetic variables, variables-verification and validation of simulation models.

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test (**on minimum Two Modules**) and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved.

|--------------------|--|---------|
| CCDLO1013 | Artificial Intelligence and Expert Systems | 04 |

- 1. To Understand and explain the basic knowledge representation, problem solving, and learning methods of Artificial Intelligence and expert system.
- 2. To Assess the applicability, strengths, and weaknesses of the basic knowledge representation, problem solving, and learning methods in solving particular engineering problems
- 3. To equip students with the tools to tackle new AI paradigm, develop an interest in the field sufficient to take more advanced subjects.
- 4. To develop intelligent systems by assembling solutions to concrete computational problems.

- 1. Understand knowledge base, search methods, heuristic and state space methods etc,.
- 2. Understand/Simulate/imitate an intelligent human being, in terms of conversation.
- 3. Understand artificial intelligence, problem solving, intelligent agents, expert systems, search techniques.
- 4. Develop a piece of software which is able to process natural language, knowledge representation.

| Module | Detailed Contents | Hrs |
|--------|--|-----|
| 01 | AI and Internal Representation: Introduction, definitions-Turing approach, Cognitive modeling approach, Laws of thought approach, The rational agent approach, Foundations of AI (history). Intelligent Agents: Concept of Rational Agent, Structure of Intelligent agents, agent program, Examples. Simple reflex agent, Goal based agent, Utility based agent, Agent Environments, environment programs, Examples. Problem Solving: Solving problems by searching, Problem Formulation, Search Strategies, Uninformed Search Techniques, DFS, BFS, Uniform cost search, Iterative Deepening, Comparing different Techniques, Informed search methods – Best First Search, heuristic functions, Hill-Climbing, A*.IDA*. Crypt Arithmetic. | 10 |
| 02 | Game playing: Perfect decisions in two person games, Imperfect decisions, Alpha-beta pruning, Games with element of chance. Knowledge based agent, WUMPUS simple environmental class game, knowledge representations, reasoning and logic, prepositional logic, Agent for WUMPUS, translating knowledge into action, problems with prepositional agent. First order logics, (syntax and semantics), logical agent for WUMPUS, simple reflex agent, Representing change in the world, situation calculus, frame problems and relatives. Basic representations for planning, situation state and plan, representation for plans, practical planning. | 10 |
| 03 | Expert Systems: Characteristics, capabilities, components, limitations, applications. Expert system technologies and its benefits. Programming in LISP or PROLOG: Lisps, Typing at Lisp, Defining Programs, Basic Flow of Control in Lisp, Lisp Style, Atoms and Lists, Basic Debugging, Building Up List Structure, More on Predicates, Properties, Pointers, Cell Notation and the Internals (Almost) of Lisp, Destructive Modification of Lists, The for Function, Recursion, Scope of Variables Input/output, Macros. Data warehousing & Data Mining. Online Analytic Processing [OLAP]: its architecture and its use. Java implementations. | 08 |

| 04 | Fundamentals Concepts and Models of Artificial Neural Systems: Biological Neuron and their Artificial Models, Models of ANN, Learning and Adaptation, Neural Networking Learning Rules. Single-layer Perception Classifiers. Multilayer Feed forward Networks: Linearly Non-separable Pattern Classification, Delta Learning Rule, Feed forward Recall and Error Back-Propagation Training, Learning Factor | 08 |
|----|---|----|
| 05 | Uncertainty: uncertainty, representation of knowledge in uncertain domain, semantics of belief network, Representing ignorance-Dempster-shafer theory. Representing vagueness: Fuzzy sets and fuzzy logics, Fuzzy Relations, Fuzzy Function, Fuzzy Measures, Probabilities & possibilities. Fuzzy Modeling and applications of Fuzzy Control, Neural and fuzzy machine Intelligence. Representing decision problems, Using decision networks, making simple decision and complex decision. | 08 |
| 06 | Genetic Algorithm: Simple genetic algorithm, Simulation by hands, similarity templates (Schemata), Mathematical foundations, Schema Processing at work. The two- armed and k- armed Bandit Problem, The building block hypothesis, The minimal Deceptive Problem. Computer implementation of Genetic algorithm, Data Structures, Reproduction, Cross over and Mutation. Time to reproduce and time to Cross Mapping, Objective function to fitness, form, Fitness scaling. Applications of genetic algorithm, De-Jong and Function Optimization, Improvement in basic techniques. Introduction to Genetics based machine Learning its applications. | 08 |

| CCDLO1014 | Advanced Finite Element Analysis | 04 |

1. To develop proficiency in finite element method after understanding the fundamental principles of FEM to solve realistic engineering problems in the field of thermal engineering, structural engineering, vibration analysis, fluid flow, etc.

- 1. Generate the governing Finite element equations for systems governed by partial differential equations
- 2. Solve problems related trusses, heat transfer, free vibrations and fluid flow problems
- 3. Solve time dependent and / or non-linear problems
- 4. Use commercial software package to perform structural analysis, heat transfer modeling, fluid flow modeling and interpret the results.

| Module | Detailed content | Hrs |
|--------|--|-----|
| 1 | Introduction to FEA, General FEM procedure, Approximate solutions of differential equations: FDM method, W-R technique, collocation least square sub-domain and Galerkin method Numerical integration, Gauss quadrature in 2-D and 3-D Structure of FEA program, Pre and Post processor, commercially available standard packages, and desirable features of FEA packages. Principal of minimum total potential, elements of variational calculus, minimization of functional, Rayleigh-Ritz method, Formulation of elemental | 12 |
| 2 | matrix equation, and assembly concepts. One Dimensional FEM: Coordinate system: Global, local, natural coordinate system. Shape functions: Polynomial shape functions, Derivation of shape functions, Natural co-ordinate and coordinate transformation, Linear quadratic and cubic elements, Shape functions using Lagrange polynomials. Convergence and compatibility requirement of shape functions. One dimensional field problems: structural analysis (step-bar, taper-bar). Structural analysis with temperature effect, Thermal analysis, heat transfer from composite bar, fins. Fluid network and flow through porous medium, analysis of electrical network problems by FEA | 10 |
| 3 | Trusses, Thermal effects in truss members, Beams. Two dimensional finite elements formulations, Threenoded triangular element, Four-noded rectangular element, Four-noded quadrilateral element, derivation of shape functions: natural coordinates, triangular elements, and quadrilateral elements. Six-noded triangular elements, Eight-noded quadrilateral elements, Nine-noded quadrilateral element; Strain displacement matrix for CST element | 8 |
| 4 | Penalty Method, Lagrange methods, Multipoint Constraints Concept of Master/Slave entities Examples of Contact problems. Iso-parametric concepts, basic theorem, Iso-parametric, super-parametric, subparametric elements, Concept of Jacobian | 08 |

| 5 | • Finite element formulation of Dynamics, application to free-vibration problems, | 06 |
|---|--|----|
| | Lump and consistent mass matrices, Eigen value problems. | |
| | • Transient dynamic problems in heat transfer and solid mechanics. | |
| | • Introduction to time-integration methods: Implicit and Explicit methods, | |
| | Convergence, Impact of Mesh quality on convergence | |
| 6 | Three dimensional elements: Tetrahedron, Rectangular prism (brick), Arbitrary hexahedron; Three Dimensional polynomial shape functions, Natural coordinates in 3D, Three dimensional Truss(space trusses) Introduction to material models: Introduction to plasticity (Von-Mises Plasticity), Hyper –elasticity. Generating and using experimental data to model materialbehaviour. | 08 |
| | • Errors in FEA, sources of errors, method of elimination, Patch test. | |

| ILO 1011 | Product Life Cycle Management | 03 |

- 1. To familiarize the students with the need, benefits and components of PLM
- 2. To acquaint students with Product Data Management & PLM strategies
- 3. To give insights into new product development program and guidelines for designing and developing a product
- 4. To familiarize the students with Virtual Product Development

- 1. Gain knowledge about phases of PLM, PLM strategies and methodology for PLM feasibility study and PDM implementation.
- 2. Illustrate various approaches and techniques for designing and developing products.
- 3. Apply product engineering guidelines / thumb rules in designing products for moulding, machining, sheet metal working etc.
- 4. Acquire knowledge in applying virtual product development tools for components, machining and manufacturing plant

| Module | Detailed Contents | Hrs |
|--------|---|-----|

| ILO 1013 | Management Information System | 03 |

- 1. The course is blend of Management and Technical field.
- 2. Discuss the roles played by information technology in today's business and define various technology architectures on which information systems are built
- 3. Define and analyze typical functional information systems and identify how they meet the needs of the firm to deliver efficiency and competitive advantage
- 4. Identify the basic steps in systems development

Outcomes: Learner will be able to...

- 1. Explain how information systems Transform Business
- 2. Identify the impact information systems have on an organization
- 3. Describe IT infrastructure and its components and its current trends
- 4. Understand the principal tools and technologies for accessing information from databases to improve business performance and decision making
- 5. Identify the types of systems used for enterprise-wide knowledge management and how they provide value for businesses

| Module | Detailed Contents | Hrs |
|--------|---|-----|
| 01 | Introduction To Information Systems (IS): Computer Based Information Systems, Impact of IT on organizations, Importance of IS to Society. Organizational Strategy, Competitive Advantages and IS. | 4 |
| 02 | Data and Knowledge Management: Database Approach, Big Data, Data warehouse and Data Marts, Knowledge Management. Business intelligence (BI): Managers and Decision Making, BI for Data analysis and Presenting Results | 7 |
| 03 | Ethical issues and Privacy: Information Security. Threat to IS, and Security Controls | 7 |
| 04 | Social Computing (SC): Web 2.0 and 3.0, SC in business-shopping, Marketing, Operational and Analytic CRM, E-business and E-commerce – B2B B2C. Mobile commerce. | 7 |
| 05 | Computer Networks Wired and Wireless technology, Pervasive computing, Cloud computing model. | 6 |
| 06 | Information System within Organization: Transaction Processing Systems, Functional Area Information System, ERP and ERP support of Business Process. Acquiring Information Systems and Applications: Various System development life cycle models. | 8 |

- 1. Formulate a real-world problem as a mathematical programming model.
- 2. Understand the mathematical tools that are needed to solve optimization problems.
- 3. Use mathematical software to solve the proposed models.

- 1. Understand the theoretical workings of the simplex method, the relationship between a linear program and its dual, including strong duality and complementary slackness.
- 2. Perform sensitivity analysis to determine the direction and magnitude of change of a model's optimal solution as the data change.
- 3. Solve specialized linear programming problems like the transportation and assignment problems, solve network models like the shortest path, minimum spanning tree, and maximum flow problems.
- 4. Understand the applications of integer programming and a queuing model and compute important performance measures

| Module | Detailed Contents | Hrs | |
|--------|---|-----|--|
| | Introduction to Operations Research: Introduction, , Structure of the Mathematical | | |
| | Model, Limitations of Operations Research | | |
| | Linear Programming: Introduction, Linear Programming Problem, Requirements of | | |
| | LPP, Mathematical Formulation of LPP, Graphical method, Simplex Method Penalty | | |
| | Cost Method or Big M-method, Two Phase Method, Revised simplex method, | | |
| | Duality , Primal – Dual construction, Symmetric and Asymmetric Dual, Weak Duality | | |
| | Theorem, Complimentary Slackness Theorem, Main Duality Theorem, Dual Simplex | | |
| | Method, Sensitivity Analysis | | |
| 01 | Transportation Problem : Formulation, solution, unbalanced Transportation problem. | 14 | |
| _ | Finding basic feasible solutions – Northwest corner rule, least cost method and Vogel's | | |
| | approximation method. Optimality test: the stepping stone method and MODI method. | | |
| | Assignment Problem: Introduction, Mathematical Formulation of the Problem, | | |
| | Hungarian Method Algorithm, Processing of n Jobs Through Two Machines and m | | |
| | Machines, Graphical Method of Two Jobs m Machines Problem Routing Problem, | | |
| | Travelling Salesman Problem | | |
| | Integer Programming Problem : Introduction, Types of Integer Programming Problems, Gomory's cutting plane Algorithm, Branch and Bound Technique. | | |
| | Introduction to Decomposition algorithms. | | |
| | Queuing models: queuing systems and structures, single server and multi-server | | |
| 02 | models, Poisson input, exponential service, constant rate service, finite and infinite | 05 | |
| 02 | population | | |
| | Simulation: Introduction, Methodology of Simulation, Basic Concepts, Simulation | | |
| 0.2 | Procedure, Application of Simulation Monte-Carlo Method: Introduction, Monte-Carlo | 0.5 | |
| 03 | Simulation, Applications of Simulation, Advantages of Simulation, Limitations of | 05 | |
| | Simulation | | |
| | Dynamic programming . Characteristics of dynamic programming. Dynamic | | |
| 04 | programming approach for Priority Management employment smoothening, capital | 05 | |
| | budgeting, Stage Coach/Shortest Path, cargo loading and Reliability problems. | | |
| | Game Theory. Competitive games, rectangular game, saddle point, minimax | | |
| 05 | (maximin) method of optimal strategies, value of the game. Solution of games with | 05 | |
| | saddle points, dominance principle. Rectangular games without saddle point – mixed | | |
| | strategy for 2 X 2 games. | | |

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

| ILO 1017 | Disaster Management and Mitigation Measures | 03 |

- 1. To understand physics and various types of disaster occurring around the world
- 2. To identify extent and damaging capacity of a disaster
- 3. To study and understand the means of losses and methods to overcome /minimize it.
- 4. To understand role of individual and various organization during and after disaster
- 5. To understand application of GIS in the field of disaster management
- 6. To understand the emergency government response structures before, during and after disaster

- 1. Get to know natural as well as manmade disaster and their extent and possible effects on the economy.
- 2. Plan of national importance structures based upon the previous history.
- 3. Get acquainted with government policies, acts and various organizational structure associated with an emergency.
- 4. Get to know the simple do's and don'ts in such extreme events and act accordingly.

| Module | Detailed Contents | Hrs |
|--------|--|-----|
| 01 | Introduction | |
| | 1.1 Definition of Disaster, hazard, global and Indian scenario, general perspective, importance of study in human life, Direct and indirect effects of disasters, long term effects of disasters. Introduction to global warming and climate change. | 03 |
| | Natural Disaster and Manmade disasters: | |
| 02 | 2.1 Natural Disaster: Meaning and nature of natural disaster, Flood, Flash flood, drought, cloud burst, Earthquake, Landslides, Avalanches, Volcanic eruptions, Mudflow, Cyclone, Storm, Storm Surge, climate change, global warming, sea level rise, ozone depletion 2.2 Manmade Disasters: Chemical, Industrial, Nuclear and Fire Hazards. Role of growing population and subsequent industrialization, urbanization and changing lifestyle of human beings in frequent occurrences of manmade disasters. | 09 |
| | Disaster Management, Policy and Administration | 1 |
| 03 | 3.1 Disaster management: meaning, concept, importance, objective of disaster management policy, disaster risks in India, Paradigm shift in disaster management. 3.2 Policy and administration: Importance and principles of disaster management policies, command and coordination of in disaster management, rescue operations-how to start with and how to proceed in due course of time, study of flowchart showing the entire process. | 06 |
| 04 | Institutional Framework for Disaster Management in India: 4.1 Importance of public awareness, Preparation and execution of emergency management program. Scope and responsibilities of National Institute of Disaster Management (NIDM) and National disaster management authority (NDMA) in India. Methods and measures to avoid disasters, Management of casualties, set up of emergency facilities, importance of effective communication amongst different agencies in such situations. 4.2 Use of Internet and softwares for effective disaster management. Applications of GIS, Remote sensing and GPS in this regard. | 06 |
| 05 | Financing Relief Measures: 5.1 Ways to raise finance for relief expenditure, role of government agencies and NGO's in this process, Legal aspects related to finance raising as well as overall management of disasters. Various NGO's and the works they have carried out in the past on the occurrence of various disasters, Ways to approach these teams. 5.2 International relief aid agencies and their role in extreme events. | 09 |

| 6.4 Do's and don'ts in case of disasters and effective implementation of relief aids. |

| ILO 1018 | Energy Audit and Management | 03 |

- 1. To understand the importance energy security for sustainable development and the fundamentals of energy conservation.
- 2. To introduce performance evaluation criteria of various electrical and thermal installations to facilitate the energy management
- 3. To relate the data collected during performance evaluation of systems for identification of energy saving opportunities.

- 1. To identify and describe present state of energy security and its importance.
- 2. To identify and describe the basic principles and methodologies adopted in energy audit of an utility.
- 3. To describe the energy performance evaluation of some common electrical installations and identify the energy saving opportunities.
- 4. To describe the energy performance evaluation of some common thermal installations and identify the energy saving opportunities
- 5. To analyze the data collected during performance evaluation and recommend energy saving measures

| Module | Detailed Contents | Hrs |
|--------|--|-----|
| 01 | Energy Scenario: Present Energy Scenario, Energy Pricing, Energy Sector Reforms, Energy Security, Energy Conservation and its Importance, Energy Conservation Act-2001 and its | 04 |
| | Features. Basics of Energy and its various forms, Material and Energy balance | |
| 02 | Energy Audit Principles: Definition, Energy audit- need, Types of energy audit, Energy management (audit) approach-understanding energy costs, Bench marking, Energy performance, Matching energy use to requirement, Maximizing system efficiencies, Optimizing the input energy requirements, Fuel and energy substitution. Elements of monitoring& targeting; Energy audit Instruments; Data and information-analysis. Financial analysis techniques: Simple payback period, NPV, Return on investment (ROI), Internal rate of return (IRR) | 08 |
| 03 | Energy Management and Energy Conservation in Electrical System: Electricity billing, Electrical load management and maximum demand Control; Power factor improvement, Energy efficient equipments and appliances, star ratings. Energy efficiency measures in lighting system, Lighting control: Occupancy sensors, daylight integration, and use of intelligent controllers. Energy conservation opportunities in: water pumps, industrial drives, induction motors, motor retrofitting, soft starters, variable speed drives. | 10 |
| 04 | Energy Management and Energy Conservation in Thermal Systems: Review of different thermal loads; Energy conservation opportunities in: Steam distribution system, Assessment of steam distribution losses, Steam leakages, Steam trapping, Condensate and flash steam recovery system. General fuel economy measures in Boilers and furnaces, Waste heat recovery, use of insulation- types and application. HVAC system: Coefficient of performance, Capacity, factors affecting Refrigeration and Air Conditioning system performance and savings opportunities. | 10 |
| 05 | Energy Performance Assessment: On site Performance evaluation techniques, Case studies based on: Motors and variable speed drive, pumps, HVAC system calculations; Lighting System: Installed Load Efficacy Ratio (ILER) method, Financial Analysis. | 04 |
| 06 | Energy conservation in Buildings: Energy Conservation Building Codes (ECBC): Green Building, LEED rating, Application of Non-Conventional and Renewable Energy Sources | 03 |

| CCL 101 | CAD and Computer Aided Engineering | 01 |
| | | |

The laboratory will focus on the following:

| Module | Detailed Contents | Lab Sessions |
|--------|---|-----------------|
| 01 | 3D - Modeling, Assembly & Drafting | 5 |
| 02 | Kinematic &Kinetic Analysis of Mechanisms | 4 |
| 03 | Finite Element Analysis (FEA) or Computational Fluid Dynamics (CFD) or Multibody dynamics (MBD) | 4 |

Assessment:

End Semester Examination: Practical/Oral examination is to be conducted by pair of internal and

external examiners

| Subject Code | Subject Name | Credits |
|--------------|---------------------------|---------|
| CCL 102 | Mechatronics and Robotics | 01 |
| | | |

The laboratory will focus on the following:

| Module | Detailed Contents | Lab Sessions |
|--------|--|-----------------|
| 01 | Automation using Pneumatics and Hydraulics | 4 |
| 02 | Programmable logic controllers | 3 |
| 03 | Interfacing Servo motor/Stepper motor /Keyboard etc. with Micro controller | 3 |
| 04 | Programming & Manipulating an Industrial Manipulator | 3 |

Assessment:

End Semester Examination: Practical/Oral examination is to be conducted by pair of internal and

external examiners

| Course Code | Course Name | Credits |
|--------------------|-------------|---------|
| CCC201 | Robotics | 04 |

Course Objectives

- 1. To familiarize the students with robotic systems and their applications in flexible or agile manufacturing.
- 2. To make conversant with robotic element / peripherals, their selection and interface with manufacturing equipments.
- 3. To explain the basics of robot kinematics.
- 4. To explain the applicability of machine vision and various image processing methods.
- 5. Students should have knowledge of path control and trajectory planning.

Course Outcomes: Learners will be able

- 1. To know the robot systems and their applications in agile manufacturing.
- 2. To have knowledge of robotic peripherals, their selection and their utility.
- 3. To have knowledge of basic robot kinematics.
- 4. Be acquainted with various image processing techniques.
- 5. To know path control and different trajectory planning.

| Module | Detailed Contents | Hrs. |
|--------|---|------|
| 01 | Introduction: Automation & robotics, Robotic System & Anatomy Classification, Future Prospects. Robotic Application in Manufacturing: Material transfer, Machine loading & unloading, Processing operations, Assembly & Inspectors. Social Issues and Economics of robotics Drives: Control Loops, Basic Control System Concepts & Models, Control System Analysis, Robot Activation & Feedback Components, Position & Velocity Sensors, Actuators, Power Transmission Systems. | 10 |
| 02 | Robot & its Peripherals: End Effecters - types, Mechanical & other grippers, Tool as end effecter Sensors: Sensors in Robotics, Tactile Sensors, Proximity & Range Sensors, Sensor Based Systems Robotic Cell Design & Control. | 08 |
| 03 | Robot Kinematics: Coordinate Frames, Rotations, Homogeneous Coordinates, Arm Equation of Planer Robot, Four axis SCARA Robot, TCV, Inverse Kinematics of Planer Robot, Four Axis SCARA Robot. | 10 |
| 04 | Trajectory Planning & Robot Dynamics: Manipulator Path Control- Linear, Quadratic and Cubic Interpolation, Work Space Analysis, Robot Dynamics –Langrangian Dynamics of one and two link robot arm. | 08 |
| 05 | Machine Vision: Introduction, Low level & High level vision, Sensing & Digitizing, Image processing & analysis, Segmentation, Edge detection, Object description& recognition, Interpretation, Noises in Image, Applications, | 08 |

| 06 | Programming For Robots: Methods, Robot programme as a path in space, Motion interpolation, level & task level languages, Robot languages; Programming in suitable languages Characteristics of robot Robot Intellgence& Task Planning: Introduction, State space search, Problem reduction, Use of predictive logic, Means -Ends Analysis, Problem solving, Robot learning, Robot task planning. | 08 | |

| CCDLO2021 | Smart Materials | 04 |

- 1. To study the working principles of various smart materials.
- 2. To identify applicability of various smart materials as actuator and sensor.
- 3. To study advances in smart materials

- 1. Understand working of smart materials and their application as actuator and sensor.
- 2. Select an appropriate smart material for a given application.
- 3. Identify applicability of smart materials for new prospective smart structures

| Module | Detailed Contents | Hrs. |
|--------|--|------|
| 01 | Introduction to Smart Materials: Overview of the different types of Smart Materials, Smart materials used in structures, smart material for sensors, actuators controls, memory and energy storage and their inter-relationships, concept of High | 08 |
| | bandwidth- low strain generating materials (HBLS), and Low Bandwidth High Strain Generating Materials (LBHS) | |
| 02 | Important Concepts of Smart Materials: artificial skins, artificial muscles, biomimetic materials, materials with tunable responses, non-linear properties, self healing materials, adaptive structures, self replicating materials/structures, self assembly, inch worm devices, hysteresis, integrated sensing and actuation | 10 |
| 03 | Overview of the following materials with focus on synthesis, constitutive/governing relationships, strengths and weaknesses, and applications (both sensing and actuation etc) 1. Peizoelectric Materials 2. Magnetostrictive Materials 3. Shape Memory Alloys 4. Electroactive Polymers | 10 |
| 04 | Overview of the following materials with focus on synthesis, strengths and weaknesses, and applications 1. Ferrofluids and Magneto rheological Fluids and applications in dampers 2. Soft Matter and its applications as smart skins, smart textiles etc 3. Carbon Nanotubes and Carbon nano-structures and its applications 4. Thermoelectric Materials and Peltier devices | 08 |
| 05 | Smart Materials for Energy Applications: Materials used for energy storage, Hydrogen Storage Materials, Energy harvesting, Energy scavenging from vibrations | 08 |
| 06 | Composite Materials: Introduction to Composite Materials, Nano Composite Materials, Soft conducting and magnetic solids, active fiber composites, Selfheating cement/ polymer matrix composites | 08 |

Internal:

Assessment consists of two tests out of which; one should be compulsory class test (on minimum **Two Modules**) and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved.

| CCDLO2022 | Rapid Manufacturing | 04 |

- 1. To acquaint with various rapid manufacturing technologies.
- 2. To familiarize with various software solutions for designing and developing products using rapid manufacturing techniques.
- 3. To familiarize with applications of these techniques in various engineering and biomedical fields.

Outcomes:

Learner will be able to...

- 1. Demonstrate understanding of various rapid manufacturing techniques.
- 2. Develop competency in designing and developing products using rapid manufacturing technology.

| Module | Detailed Contents | Hrs |
|--------|---|-----|
| 01 | Rapid Manufacturing Historical Development Additive, Subtractive and Formative Manufacturing Applications: Design, Planning, Manufacturing and Tooling Applications: Automotive, Aerospace, Electronics, Jewelry, Bio-Medical Fundamentals of Rapid Prototyping and Manufacturing, Design Process Rapid Prototyping and Manufacturing Process Chain Classification of Additive Manufacturing Processes | 8 |

Course Prerequisite:

Sensors, Actuators, Instrumentation system and VLSI Technology

Objectives

- 1. To understand the basic characteristics of MEMS and its processing steps.
- 2. To demonstrate the use of semiconductor based processing modules used in the fabrication of variety
 - of sensors and actuators (e.g. pressure sensors, accelerometers, etc.) at the micro-scale.
- 3. To understand the of basic design and operation of MEMS sensors and actuators with proper characterization.
- 4. To make use of the MEMS devices for real time applications

- 1. Understand the underlying fundamental principles of MEMS devices including physical operation, mathematical modeling
- 2. Select the appropriate material and processes while fabrication of MEMS devices
- 3. Design and simulate MEMS devices and system using standard simulation tools.
- 4. Develop different concepts of micro system sensors and actuators for real-world applications.

| Modul e No. | Detailed contents | Hours |
|----------------|---|-------|
| | Introduction to MEMS Introduction to MEMS & its characteristics, Real world Sensor/Actuator examples (DMD, Air-bag, pressure sensors). MEMS Sensors in Internet of Things (IoT), BioMedical Applications | 04 |
| 2 | MEMS Materials and their Properties Materials (eg. Si, SiO2, SiN, Cr, Au, Ti, SU8, PMMA, Pt); Important properties: Young modulus, Poisson's ratio, density, piezoresistive coefficients, TCR, Thermal Conductivity, Material Structure. Understanding Selection of materials based on applications | 10 |
| 3 | Fabrication Processes common to MEMS Understanding MEMS Processes & Process parameters for: Cleaning, Growth & Deposition, Ion Implantation & Diffusion, Annealing, Lithography. Understanding selection of Fab processes based on Applications | 10 |
| 4 | MEMS Specific Fabrication Processes Understanding MEMS Processes & Process parameters for: Wet & Dry etching, Bulk & Surface Micromachining, Die, Wire & Wafer Bonding, Dicing, Packaging. Understanding selection of Fab processes based on Applications | 08 |
| 5 | MEMS Devices: Architecture and working basic quantitative behaviour of Cantilevers, Micro-heaters, Accelerometers, Pressure Sensors, Micro-mirrors in DMD, Inkjet printer-head. Understanding steps involved in Fabricating above devices. Piezoresistance, TCR, Stiffness, Adhesion, Vibration, Resonant frequency, & importance of these measurements in studying device behavior, MEMS Reliability | 10 |
| 6 | Applications of MEMS devices Industrial applications with detailed understanding of role of MEMS as sensors and actuators with proper case studies. | 10 |

| CCDLO2024 | Optimization | 04 |

- 1.To understand various linear, nonlinear and other optimization techniques.
- 2. To understand various decision making methods.

- 1. Formulate the problem as LPP and analyse the sensitivity of a decision variable.
- 2. Apply various linear and non linear techniques for problem solving in various domain.
- 3. Apply decision making methods for problem in manufacturing environment and other domain.

| Module | Detailed content | Hours |
|--------|--|-------|
| 1 | Basic Concepts: Statement of the Optimization Problem, Basic Definitions, Optimality Criteria for Unconstained Optimization, OptimalityCriteria for Constrained Optimization, Engineering Application of Optimization, Overview of optimization technique, Interdisciplinary nature, Introduction to related software. | |
| 2 | Linear Programming Problem: Formulation, Simplex method, Big M Method, Two Phase, Primal to Dual, Dual Simplex method, Sensitivity Analysis. | 10 |
| 3 | Integer L.P. Model: Gomory's cutting plane method, Branch & Bound Technique. Non L.P. Model: Lagrangian method & Kuhn tucker Method. | 08 |
| 4 | Multi Criterion Decision-making (MCDM) Methods: Introduction to multi criterion optimization, Simple Additive Weighting (SAW) Method, Weighted Product Method (WPM), Analytic Network Process (ANP), Analytic Hierarchy Process (AHP) Method, TOPSIS Method, PROMETHEE Multi Objective Decision making (MODM) Methods: Introduction to Multi objective optimization, Traditional Techniques such as, quadratic programming, geometric programming, Numerical on goal programming and dynamic programming. | |
| 5 | Newtonian Method: Newton's method, Marquardt's method, Quasi Newton method. Discrete Event Simulation: Generation of Random Variable, Simulation Processes, Monte-Carlo Technique. | 08 |

| 6 | Robust Design Methods: DOE and Taguchi techniques Response Surface | 10 |
|---|--|----|
| | Method: Response Surface, The Least-Squares Methods, Two-Level Factorial | |
| | Design, Addition of Center Points, Central Composite Design(CCD), | |
| | Sequential Nature of RSM. | |
| | | |

| ILO2021 | Project Management | 03 |

- 1. To familiarize the students with the use of a structured methodology/approach for each and every unique project undertaken, including utilizing project management concepts, tools and techniques.
- 2. To appraise the students with the project management life cycle and make them knowledgeable about the various phases from project initiation through closure.

- 1. Apply selection criteria and select an appropriate project from different options.
- 2. Write work break down structure for a project and develop a schedule based on it.
- 3. Identify opportunities and threats to the project and decide an approach to deal with them strategically.
- 4. Use Earned value technique and determine & predict status of the project.
- 5. Capture lessons learned during project phases and document them for future reference

| Module | Detailed Contents | Hrs |
|--------|--|-----|
| | Project Management Foundation: Definition of a project, Project Vs Operations, Necessity of project management, Triple | |
| 01 | constraints, Project life cycles (typical & atypical) Project phases and stage gate process. Role of project manager. Negotiations and resolving conflicts. Project management in various organization structures. PM knowledge areas as per Project Management Institute (PMI). | 5 |
| 02 | Initiating Projects: How to get a project started, Selecting project strategically, Project selection models (Numeric /Scoring Models and Non-numeric models), Project portfolio process, Project sponsor and creating charter; Project proposal. Effective project team, Stages of team development & growth (forming, storming, norming & performing), team dynamics. | 6 |
| 03 | Project Planning and Scheduling: Work Breakdown structure (WBS) and linear responsibility chart, Interface Co-ordination and concurrent engineering, Project cost estimation and budgeting, Top down and bottoms up budgeting, Networking and Scheduling techniques. PERT, CPM, GANTT chart. Introduction to Project Management Information System (PMIS). | 8 |
| 04 | Planning Projects: Crashing project time, Resource loading and leveling, Goldratt's critical chain, Project Stakeholders and Communication plan. Risk Management in projects: Risk management planning, Risk identification and risk register. Qualitative and quantitative risk assessment, Probability and impact matrix. Risk response strategies for positive and negative risks | 6 |
| 05 | 5.1 Executing Projects: Planning monitoring and controlling cycle. Information needs and reporting, engaging with all stakeholders of the projects. Team management, communication and project meetings. 5.2 Monitoring and Controlling Projects: Earned Value Management techniques for measuring value of work completed; Using milestones for measurement; change requests and scope creep. Project audit. 5.3 Project Contracting Project procurement management, contracting and outsourcing, | 8 |
| 06 | 6.1 Project Leadership and Ethics: Introduction to project leadership, ethics in projects. Multicultural and virtual projects. 6.2 Closing the Project: Customer acceptance; Reasons of project termination, Various types of project terminations (Extinction, Addition, Integration, Starvation), Process of project termination, completing a final report; doing a lessons learned analysis; acknowledging successes and failures; Project management templates and other resources; Managing without authority; Areas of further study. | 6 |

Internal:

| ILO2024 | Human Resource Management | 03 |

- 1. To introduce the students with basic concepts, techniques and practices of the human resource management.
- 2. To provide opportunity of learning Human resource management (HRM) processes, related with the functions, and challenges in the emerging perspective of today's organizations.
- 3. To familiarize the students about the latest developments, trends & different aspects of HRM.
- 4. To acquaint the student with the importance of inter-personal & inter-group behavioral skills in an organizational setting required for future stable engineers, leaders and managers.

- 1. Understand the concepts, aspects, techniques and practices of the human resource management.
- 2. Understand the Human resource management (HRM) processes, functions, changes and challenges in today's emerging organizational perspective.
- 3. Gain knowledge about the latest developments and trends in HRM.
- 4. Apply the knowledge of behavioral skills learnt and integrate it with in inter personal and intergroup environment emerging as future stable engineers and managers.

| Module | Detailed Contents | Hrs |
|--------|--|-----|
| 01 | Introduction to HR Human Resource Management- Concept, Scope and Importance, Interdisciplinary Approach Relationship with other Sciences, Competencies of HR Manager, HRM functions. Human resource development (HRD): changing role of HRM – Human resource Planning, Technological change, Restructuring and rightsizing, Empowerment, TQM, Managing ethical issues. | 5 |
| 02 | Organizational Behavior (OB) Introduction to OB Origin, Nature and Scope of Organizational Behavior, Relevance to Organizational Effectiveness and Contemporary issues Personality: Meaning and Determinants of Personality, Personality development, Personality Types, Assessment of Personality Traits for Increasing Self Awareness Perception: Attitude and Value, Effect of perception on Individual Decision-making, Attitude and Behavior. Motivation: Theories of Motivation and their Applications for Behavioral Change (Maslow, Herzberg, McGregor); Group Behavior and Group Dynamics: Work groups formal and informal groups and stages of group development. Team Effectiveness: High performing teams, Team Roles, cross functional and self-directed team. Case study | 7 |
| 03 | Organizational Structure & Design Structure, size, technology, Environment of organization; Organizational Roles & conflicts: Concept of roles; role dynamics; role conflicts and stress. Leadership: Concepts and skills of leadership, Leadership and managerial roles, Leadership styles and contemporary issues in leadership. Power and Politics: Sources and uses of power; Politics at workplace, Tactics and strategies. | 6 |
| 04 | Human resource Planning Recruitment and Selection process, Job-enrichment, Empowerment - Job-Satisfaction, employee morale. Performance Appraisal Systems: Traditional & modern methods, Performance Counseling, Career Planning. | 5 |

| | Training & Development: Identification of Training Needs, Training Methods | |
|----|---|----|
| 05 | Emerging Trends in HR Organizational development; Business Process Re-engineering (BPR), BPR as a tool for organizational development, managing processes & transformation in HR. Organizational Change, Culture, Environment Cross Cultural Leadership and Decision Making: Cross Cultural Communication and diversity at work, Causes of diversity, managing diversity with special reference to handicapped, women and ageing people, intra company cultural difference in employee motivation. | 6 |
| 06 | HR & MIS Need, purpose, objective and role of information system in HR, Applications in HRD in various industries (e.g. manufacturing R&D, Public Transport, Hospitals, Hotels and service industries Strategic HRM Role of Strategic HRM in the modern business world, Concept of Strategy, Strategic Management Process, Approaches to Strategic Decision Making; Strategic Intent – Corporate Mission, Vision, Objectives and Goals Labor Laws & Industrial Relations Evolution of IR, IR issues in organizations, Overview of Labor Laws in India; Industrial Disputes Act, Trade Unions Act, Shops and Establishments Act | 10 |

Internal:

Assessment consists of two tests out of which; one should be compulsory class test (**on minimum Two Modules**) and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four questions need to be solved.

| Subject Code | Subject Name | Credits |
|--------------|--------------|---------|
| CCL 201 | CAM | 01 |

The laboratory will focus on the following:

1. CNC Turning, Milling, EDM, Wire-EDM and Modeling

A total of 13 laboratory assignments should be based on the following:

- 2. Operation, programming of above machines.
- 3. Tool path Simulation using software.

Assessment:

End Semester Examination: Practical/Oral examination is to be conducted by pair of internal and

external examiners

| Subject Code | Subject Name | Credits |
|--------------|---------------------|---------|
| CCL 202 | Rapid Manufacturing | 01 |
| | - | |

The laboratory will focus on the following:

| Module | Detailed Content | Lab Sessions |
|--------|---------------------------------------|--------------|
| 1 | 3D Modeling and creating STL files | 3 |
| 2 | 3D Printing of individual components | 2 |
| 3 | 3D Printing of multiple components in | 4 |
| | assembly | |
| 4 | Use of 3D printing or any other rapid | 4 |
| | manufacturing equipment | |

The laboratory assignments should be based on the following:

- 1. Introduction to Rapid manufacturing.
- 2. Rapid manufacturing system.
- 3. Rapid manufacturing methodology.
- 4. Case studies of Rapid manufacturing system.

Assessment:

End Semester Examination: Practical/Oral examination is to be conducted by pair of internal and

external examiners

| Course Code | Course Name | Credits |
|-------------|-------------|---------|
| CCS301 | Seminar | 03 |

Guidelines for Seminar

- o Seminar should be based on thrust areas in Mechanical Engineering (Thermal Engineering aspect is appreciated)
- O Students should do literature survey and identify the topic of seminar and finalize in consultation with Guide/Supervisor. Students should use multiple literature and understand the topic and compile the report in standard format as per University Guidelines for report writing and present in front of pair of Examiners appointed by the Head of the Department/Institute of respective Programme.
- Seminar should be assessed jointly by the pair of Internal and External Examiners
- o Seminar should be assessed based on following points
 - Quality of Literature survey and Novelty in the topic
 - Relevance to the specialization
 - Understanding of the topic
 - Quality of Written and Oral Presentation

| Course Code | Course Name | Credits |
|-------------|-------------------------|---------|
| CCD301/ | Dissertation (I and II) | 12 + 15 |
| CCD401 | | |

Guidelines for Dissertation

O Students should do literature survey and identify the problem for Dissertation and finalize in consultation with Guide/Supervisor. Students should use multiple literatures and understand the problem. Students should attempt solution to the problem by analytical/simulation/experimental methods. The solution to be validated with proper justification and compile the report in standard format.

Guidelines for Assessment of Dissertation I

- o Dissertation I should be assessed based on following points
 - Quality of Literature survey and Novelty in the problem
 - Clarity of Problem definition and Feasibility of problem solution
 - Relevance to the specialization
 - Clarity of objective and scope
- O Dissertation I should be assessed through a presentation by a panel of internal examiners appointed by the Head of the Department/Institute of respective Programme.

Guidelines for Assessment of Dissertation II

- o Dissertation II should be assessed based on following points
 - Quality of Literature survey and Novelty in the problem
 - Clarity of Problem definition and Feasibility of problem solution
 - Relevance to the specialization or current Research / Industrial trends
 - Clarity of objective and scope
 - Quality of work attempted
 - Validation of results
 - Quality of Written and Oral Presentation
- o Dissertation II should be assessed through a presentation jointly by Internal and External Examiners appointed by the University of Mumbai

Students should publish at least one paper based on the work in reputed International / National Conference (desirably in Refereed Journal)

Desertation Report has to be prepared strictly as per University of Mumbai report writing guidelines.
